A Comprehensive Analysis of Financial Performance: Insights from a Leading Banks

Introduction:

1.1 Overview:

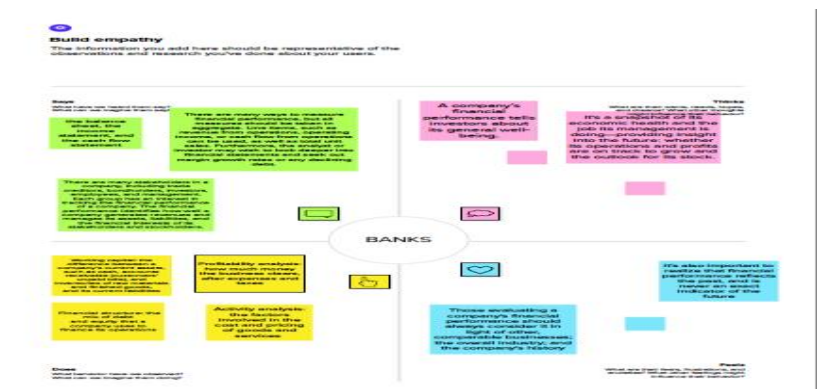

Financial performance is a subjective measure of how well a firm can use assets from its primary mode of business and generate revenues. The term is also used as a general measure of a firm's overall financial health over a given period.

1.2 Purpose:

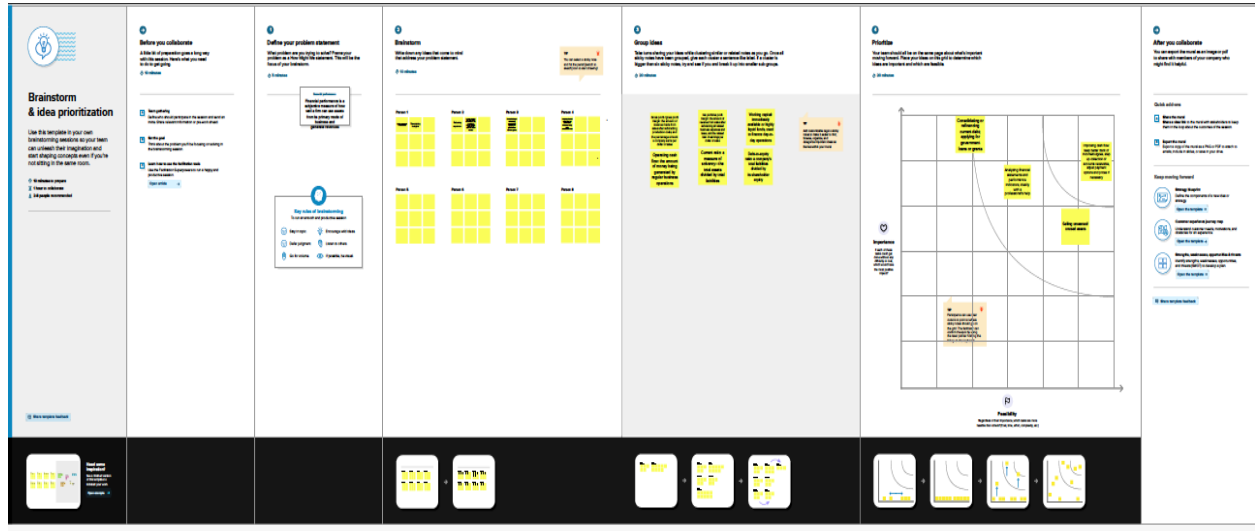

- **Gross profit** /gross profit margin: the amount of revenue made from sales after subtracting production costs, and the percentage amount a company earns per dollar of sales
- Net profit/net profit margin: the amount of revenue from sales after subtracting all related business expenses and taxes, and the related ratio of earnings per dollar of sales
- Working capital: immediately available or highly liquid funds, used to finance day-to-day operations
- Operating cash flow: the amount of money being generated by regular business operations
- Current ratio: a measure of solvency—the total assets divided by total liabilities
- **Debt-to-equity ratio**: a company's total liabilities divided by its **shareholder equity**
- Quick ratio: another solvency measure, that calculates the percentage of very liquid current assets (cash, securities, accounts receivables) against total liabilities
- Inventory turnover: how much inventory is sold within a certain period, and how often the entire inventory was sold
- **Return on equity**: net income divided by shareholder equity (a company's assets minus its debts)

Problem Definition & Design Thinking:

2.1 Empathy Map:

2.2 Ideation & Brainstorming Map:

RESULT:

The screenshot shows the MySQL Workbench interface with a query execution result. The query executed was:

```
1 create schema data_set;
```

The output shows the following actions and messages:

| # | Time | Action | Message | Duration / Fetch |
|----|----------|--|---|------------------|
| 9 | 09:19:22 | SHOW SESSION VARIABLES LIKE 'lower_case_table_names' | OK | 0.000 sec |
| 10 | 09:19:22 | SHOW TABLES FROM 'data_set' like 'banks data' | OK | 0.000 sec |
| 11 | 09:21:33 | CREATE TABLE 'data_set'. 'banks data' ('rank' int, 'bank' text, 'country' text, 'total_assets_us_b' text, 'balance_sheet' text) | OK | 0.000 sec |
| 12 | 09:21:34 | PREPARE stmt FROM 'INSERT INTO 'data_set'. 'banks data' ('rank', 'bank', 'country', 'total_assets_us_b', 'balance_sheet') VALUES ('rank', 'bank', 'country', 'total_assets_us_b', 'balance_sheet') | OK | 0.000 sec |
| 13 | 09:21:39 | DEALLOCATE PREPARE stmt | OK | 0.000 sec |
| 14 | 09:22:26 | create schema data_set | Error Code: 1007. Can't create database 'data_set'; database exists | 0.000 sec |

The error message indicates that the database 'data_set' already exists, preventing the creation of a new schema with the same name.

Read Only Context Help Snippets

Automatic context help is disabled. Use the toolbar to manually get help for the current caret position or to toggle automatic help.

ADVANTAGES & DISADVANTAGES:

- A cash flow statement is one of the financial statements used in financial analysis.
- The financial statements show the existing liabilities. These include business loans, lines of credit, credit cards and credit extended from vendors.
- The balance sheet is a component of the financial statement. Assets are included on the balance sheet. Analyzing whether there is too much inventory or too little helps business owners prepare for upcoming sales months
- Analyzing the financial statements from quarter to quarter and year to year help business owners see trends in growth
- When a business seeks partners or investors, the financial statements are critical. Analyzing the statements not only helps investors determine if a company is making money, but it also helps to identify a reasonable cost per share.
- The financial analysis does not contemplate cost price level changes. The financial analysis might be ambiguous without the prior knowledge of the changes in accounting procedure followed by an enterprise.
- One disadvantage of using financial statements for decision making is that the data and figures are based on the market at that given time
- Another disadvantage is that a single financial statement only shows how a company is doing at one single time.

APPLICATIONS:

A financial performance analysis examines the company at a specific period in time—usually, the most recent fiscal quarter or year. The balance sheet, the income statement, and the cash flow statement are three of the most significant financial statements used in performance analysis.

Conclusion:

Financial analysis determines a company's health and stability, providing an understanding of how the company conducts its business. But it is important to know that financial statement analysis has its limitations as well. Different accounting methods adopted by different firms' changes the visible health and profit levels for either better or worse. Different analysts may get different results from the same information. Hence, we must conclude that financial statement analysis is only one of the tools (although a major one) while taking an investment decision.

Future Scope:

- Analyze financial ratios to assess profitability, solvency, working capital management, liquidity, and operating effectiveness.
- Compare current performance with historical conditions using trend analysis.
- Compare with peer companies or industry averages to find out how well companies are performing.
